

Product Spotlight:

PolyAndro-7 with Persona for Android

This is today's generation of a text-to-speech device.

PolyAndro-7 is the lightweight, portable solution for literate users on the go. It is a brilliant Android tablet with the **Persona for Android** program that provides you with clear text-to-speech voice output, and a host of other features you are certain to appreciate.

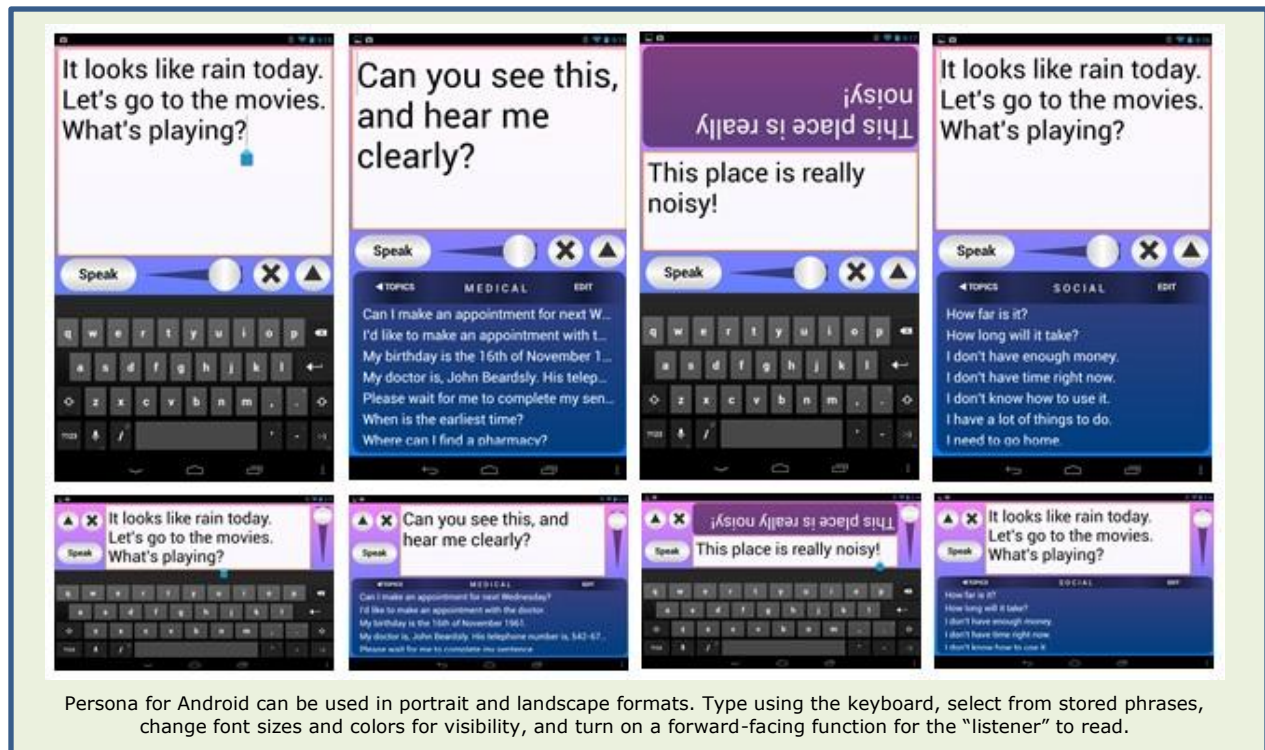

Persona for Android is a text-to-speech augmentative/alternative communication application for use on an Android tablet. It provides complete portable communication wherever it's needed. Use it in portrait or landscape formats – interactive conversation is the goal, especially over the phone. There are speed enhancements like word prediction and stored phrases, and a forward-facing display option to let your listener in on what you are typing to say.

Persona for Android can be used in portrait and landscape formats. Type using the keyboard, select from stored phrases, change font sizes and colors for visibility, and turn on a forward-facing function for the "listener" to read.

Speak your mind like never before.

In addition to being able to type and talk, **Persona** allows rapid access to pre-stored phrases. Messages and situational categories are easily created within the program. While the program's operation is mostly obvious, the Help file provides the equivalent of a user's guide and operation manual, and is available to you all the time.

Choices of voices and a list of languages

Google text-to-speech is standard; high quality speech can be downloaded directly from various synthesizer providers using Google Play store. Many languages are available, with several voice options with each language. You can even put more than one language on board and switch between them.

Persona for Android is only available on:

- ⊕ **PolyAndro-7** – A Google Nexus 7 AAC System Complete with Case, Neck strap, and Bluetooth Speaker
- ⊕ Syncing services (such as backup) require a Google account

See more of the [PolyAndro-7](#) and our [Persona for Android](#) program on our web site. You can find it under [Products\AAC\TTS](#) and [Products\AT\iOS and Android](#).
